

**Construction and Maintenance
Education Foundation**

CMEF is proud to offer Registered Department of Labor Apprenticeship Programs. Our programs currently consist of 13 different areas of focus including Construction Crafts, Safety, and Leadership.

CMEF, is the leader in craft training and workforce development in the Gulf Coast Region of Texas, and now with the tailored Registered Apprenticeship Programs, CMEF can offer much more to companies seeking government incentives or individuals wanting to earn apprenticeship credits. CMEF is a non-profit, 501c3 that focuses efforts on attracting and developing those performing work in the craft trades

Along with OSHA and NCCER credentials, apprentices will also be earning apprenticeship On the Job Training (OJT) hours, classroom credits, and level completions. This data will be collected and tracked by CMEF along with partnering companies with a proven process that will ensure the organizational and individual success.

CMEF not only offers training at its state-of-the-art training facility in La Porte, TX, but can also provide training on the jobsite, through online virtual options, and by providing Train the Trainer courses to your Subject Matter Experts, who can then deliver the material to your employees.

Through these different methods CMEF can reach any jobsite no matter how remote. The overall administration of the program will solely be CMEF's responsibility and coordinating any audits with the Department of Labor will be through CMEF.
